

Radiator cleaner

Suitable for all engines

Removes corrosion and sludge deposits in the cooling circuit

Increased operational reliability due to clean cooling system.

Neutralises lime residues

New coolant is protected from contamination by old dirt residues.

Compatible with anti-freeze

Alkaline in pH range of 9–11

Compatible with all materials used to build the radiator.

Removes deposits in the cooling circuit and cleans the cooling system of contamination. For instance, oil residues caused by damage to the cylinder heads can be removed. The radiator cleaner can also be used as a preventative measure every time the coolant is changed.

250 ml is sufficient for 10 litres of cooling water. 1000 ml is sufficient for 40 litres of cooling water.

Contents	250 ml
Colour	Yellow
Smell/fragrance	Mild
Chemical basis	Water
Shelf life from production	24 Month

Art. no. 5861 510 250

P. Qty.: 1 / 12

Details/Application

For rectifying reduced cooling performance during radiator repairs and maintenance work on the cooling system.

Instructions

Add the contents of the can to the cooling water. Open the heater valves. Run the engine at operating temperature for approx. 30 minutes. Deposits that have been dislodged by the radiator cleaner must be flushed away with water. The flushing process can be carried out without removing the thermostat. It is recommended that parts that have been affected by oil ingress, such as the expansion tank and water hoses, be replaced. Refill the cooling system after cleaning, bleed and check for leaks.

Notice

The cleaner is not suitable for vehicle operation.

The usage instructions are recommendations based on the tests we have conducted and based on our experience; carry out your own tests before each application.
